Q. What is the use of the following libraries?

1. Requests Library

Answer:

The Requests library in Python is used to send HTTP requests to websites and fetch data from web servers. It helps us access webpage content and communicate with websites.

Uses:

1. To send HTTP requests (GET, POST, etc.).
2. To fetch webpage HTML content.
3. To access data from APIs.
4. To download files and data from the internet.

Example:

```
import requests

response = requests.get("https://www.google.com")

print(response.status_code)
```

2. BeautifulSoup (bs4) Library

Answer:

BeautifulSoup is a Python library used to parse HTML and XML documents. It helps us extract specific information, such as text, links, headings and images, from web pages.

Uses:

1. To extract data from HTML pages.
2. To find specific tags and elements.
3. To extract text, links and images.
4. To make web scraping easier.

Example:

```
from bs4 import BeautifulSoup

html = "<h1>Hello Python</h1>"

soup = BeautifulSoup(html, "html.parser")
```

print(soup.h1.text)

Output:

Hello Python

Difference between Requests and BeautifulSoup

Requests	**BeautifulSoup**
Fetches webpage content.	Parses webpage content.
Sends HTTP requests.	Extracts data from HTML/XML.
Connects to websites.	Finds specific information.
Imported using import requests.	Imported using from bs4 import BeautifulSoup.

Easy way to remember:

- Requests = Fetches the webpage.
- BeautifulSoup = Extracts useful information from the webpage.

Both libraries are commonly used together for web scraping.
